

5MM LED WARNING

LED Remote Light Heads

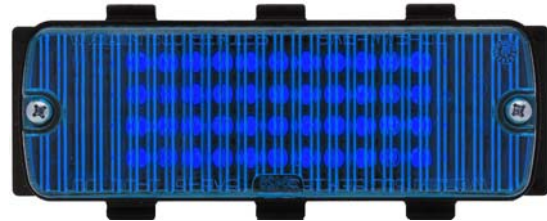

5mm LED's are the original LED type used in vehicle warning lamps. Although eclipsed by the newer generation of Super-LED warning lights they have increased in intensity over the years and can still provide a robust, economical and effective solution for vehicle warning light needs. 5mm LED warning lights are encapsulated and include SmartLED design which requires no external flasher and includes 14 Scan-Lock flash patterns, including steady burn. Surface mount light heads are designed for heavy duty performance, vibration and moisture and corrosion resistance. They draw minimal current and are rated for 100,000 of hours operation and are warranted for 5 years. Mounting options are purchased separately.

500 Series:

A compact warning light that provides 14 flash patterns including steady-burn. Surface mounting and small size makes it ideal for areas on your vehicle where effective warning was not possible before. Warning lights are available in red, amber, blue or white LEDs.
